SECTION 1

INTRODUCTION

In this publication, firms in Utah are categorized according to the number of employees working for them during March of a specified year. By grouping firms with a similar number of employees together, it is easier to analyze the counties and industries containing Utah's smallest and largest employers. It is also possible to determine which group is growing the fastest, which is providing the most employment, and which is paying the highest or lowest wages within an industry. The number of reporting units in Utah differs slightly from the number of firms. The term "reporting unit" is used to identify any firm, organization, division, or establishment for which data are separately maintained by the Utah Department of Employment Security. If a firm has branches or subsidiaries in more than one county or industry, each of these branches will be counted as an additional reporting unit. In Utah, roughly 300 firms are in this category; they are responsible for approximately 2,000 reporting units.

SECTION II

EMPLOYMENT, REPORTING UNITS, AND AVERAGE WAGE IN UTAH, BY FIRM SIZE

The State of Utah is made up of a large number of small firms. In fact, over 99 percent of all firms in the state employ fewer than 250 workers; nearly 98 percent employ fewer than 100 workers; and nearly 49 percent of Utah firms have fewer than 4 employees. Although nearly half of Utah's firms are in the 0-3 employment size class only 4 percent of the states non-agricultural employment is represented there. Over the last 14 years only 1.5 percent of total job growth has been contributed by the 0-3 size class. In contrast to the characteristics of the 0-3 size class those employers in the state with more than 1,000 employees represent only 0.2 percent of the states total reporting units yet provide nearly 26 percent of Utah's nonagricultural jobs and paid out nearly 30 percent of first quarter 1979 wages. For employers in the smallest (0-3) and largest (1,000 and over) size classes average monthly wages are nearly at opposite ends of the spectrum. At $807, the 0-3 class had the second to lowest average monthly wage while the 1,000 and over size class showed the highest with $1,105.

These comparative relationships between large and small firms have historically been about the same. However, as noted in Table 1, the number of firms with fewer than four employees and their respective employment are declining as a percent of the state total. For instance, in 1965, nearly 58 percent of Utah's reporting units and nearly 6 percent of nonagricultural employment were in the fewer than four employee interval size category. By 1979, this same size category had dropped to less than 49 percent of the state's reporting units and 4 percent of unemployment. Offsetting these declines are increases in the middle size groups.

Although the heaviest consentration of employment is in the 1,000 or more category at the total level, this same feature at major industry levels occurs only in mining, manufacturing, transportation, services and government. Construction's peak employment occurs in the 4-9 category; trade's and finance, insurance, and real estate's peak occurs in the 20-49 bracket.

In total, the highest interval size category also has the highest average monthly wage. By industry, however, there are variations from this, namely in trade, where the highest average monthly wage occurs in the 500-999 group, in finance, insurance and real estate where the peak occurs in the 50-99 category and in the service industry where the peak occurs in the 20-49 range.

SECTION III

EMPLOYMENT, WAGES, AND REPORTING UNITS BY FIRM SIZE AND INDUSTRY IN UTAH
